# 1 Introduction

This document is created as part of the **SPI-Birds Network and Database** ([www.spibirds.org](http://www.spibirds.org)). SPI-Birds is an international network of researchers and others who collect data on populations of individually marked birds, with the aim to improve data accessibility and transparency and to facilitate data reuse and collaboration. This document describes the licensing options for data hosted at the SPI-Birds Database. These licenses prescribe under what terms and conditions and for what purposes data may be reused. We believe the sharing of data will foster collaborative scientific research and educational activities internationally. SPI-Birds members endorse the principle that data from the SPI-Birds Database can be requested for academic, research, education, and other non-profit professional purposes.

## 2 Definitions

Term	Definition
<b>Data Custodian</b>	Person or organisation that is the custodian or the responsible party of a dataset hosted at SPI-Birds.
<b>Data User</b>	Person or persons who are interested in using data hosted at SPI-Birds.
<b>License Type</b>	One of three SPI-Birds data licenses, set by the <b>Data Custodian</b> , that prescribes the rights and conditions under which their data may be used.
<b>Usage Terms</b>	Specific terms set by the <b>Data Custodian</b> , often in correspondence with a <b>Data User</b> , that prescribe additional conditions under which their data may be used.

## 3 License Types

SPI-Birds offers three types of licenses (i.e., **License Types**) that the **Data Custodian** may grant to (the reuse of) their dataset. Listed from least to most restrictive: *Fully Open*, *By Attribution*, *By Permission of Data Custodian*.

Note: under none of the **License Types**, data custody is transferred to SPI-Birds. When *Fully Open* is selected, custody is waived; when *By Attribution* or *By Permission of Data Custodian* is selected, the **Data Custodian** retains custody of the data.

### 3.1 Fully Open

This license allows **Data Users** to freely build upon, enhance and reuse the data for any purposes without restriction under copyright or database law. By selecting this **License Type**, the **Data Custodian** waives all their copyright and related rights of their data to the fullest extent allowed by law.

This license is similar to [Creative Commons Zero](https://creativecommons.org/licenses/by/4.0/).

### 3.2 By Attribution

This license allows **Data Users** to distribute, adapt, and build upon the data in any medium or format, so long as attribution is given to the **Data Custodian**.

Attribution entails that the **Data User** must give appropriate credit (as described in [SPI-Birds Terms of Use & Data Access Policy](#)), and indicate if any changes were made.

This license is similar to [Creative Commons Attribution 4.0 International](#).

### 3.3 By Permission of Data Custodian

This license allows **Data Users** to adapt, and build upon the data in any medium or format, so long as permission is granted by the **Data Custodian**. This permission may be conditional on a set of conditions (i.e., **Usage Terms**) at the **Data Custodian**'s discretion.

Commonly used **Usage Terms** include: collaboration and/or co-authorship.
